(73) Abstract  
One of the most widely used treatments for oral rehabilitation of edentulous patients is Dental Implants. Dental Implants solution for restoring the missing teeth exhibit high success 10-year survival rate and 12.8% exhibited 15 years survival rate. Failure and fracture in Dental Implants are highly difficult to repair and the systematic review research study on mechanism needs to be devised for early prediction of Dental Implant failure for care repair and recovery. Proposed is a System and Method to Predict the Risk of Dental Implant Fracture and Failure. Dental Implants are subject to Pre-processing, Data Augmentation techniques such as Horizontal Flipping, Vertical Flipping and Rotation are carried out. For prediction of failure of Dental Implants, Convolutional Neural Networks built with a series of Convolution and Pooling layers are employed for accessing the risk of Dental Implants.
